| Job Title: Junior/Intermediate Software Designer | Job Code: SD-201 |
| Department: Engineering | Location: Ottawa, Canada |

Position Overview

NetFore Systems is a software services company specializing in web based applications for clients in the communications, security and enterprise domains. We are seeking a talented software designer to join our expanding engineering team. The role requires participation in the full software development lifecycle, and may from time-to-time require direct engagement and on-site work with clients.

Essential Job Functions

- Working as part of a team, contribute features to customer-specific software solutions as well as productized web applications targeted at multiple customers.
- Perform detailed requirements analysis and produce functional specifications and software design documents for assigned features.
- Contribute effort estimates for assigned features to team leads, and be accountable for delivery within these estimated and agreed schedules.
- Implement assigned features leveraging a variety of frameworks and tools in the process.
- Produce feature test cases and execute feature and integration tests.
- Provide input on assigned features to personnel responsible for the production of user documentation and training artifacts.
- Collaborate with customers on pre-production testing and related activities, as well as deployment of applications to production.

Requirements

- Bachelor's degree in Computer Engineering, Software Engineering or Computer Sciences
- Minimum of 2 years of experience in J2EE development
- Strong knowledge in object-oriented programming
- Strong knowledge of multi-threaded application development
- Experience with relational databases

Other Skills/Abilities

- Exceptional interpersonal skills and willingness and suitability for direct customer engagement.
- JSF, JSP, jQuery, Javascript
- XML, XSLT, EJB, Servlets
- Web technologies including REST and SOAP based Web Services, JSON, AJAX
- Hibernate, SQL
- Application Servers including JBoss and WebLogic
- Microsoft .NET, HTML5/CSS3, Ruby, iOS and Android programming highly desirable
- Knowledge of networking protocols including SIP viewed favourably
- Microsoft.NET technologies (VB.NET, C#, ASP.NET, Visual Studio, C++) a plus

NOTE: This job description is not intended to be all-inclusive. Employee may perform other related duties as negotiated to meet the ongoing needs of the organization.
